

Setco is seeking Product Design Engineers/Product Designers for its Cincinnati Ohio location who will use ideas and concepts to design new products. Will work with other engineers, quality control, salespeople, vendors, manufacturing personnel, and customers. Will create engineering standards for new product, such as assembly/part drawings, guidelines for customizing the standards, information for product catalogs, and instructions for customers using the product.

Primary Tasks

- Create and check manufacturing drawings.
- Assist in the development of design guidelines.
- Maintain familiarity with SETCO product design guides, standards, and specifications.
- Revise and make changes to layouts and manufacturing prints by way of Engineering Change Notices.
- Make drawing changes per checker and customer adjustments.
- Pre-order parts required for job order.
- Setup item master data records in 'MIS' system.
- Compare SETCO design to customer prints for conformity.
- Review order to create design / outline drawing.
- Create and submit customer proposal and approval drawings.
- Review complete order drawing package for correctness.
- Perform necessary calculations and provide design support to customers.
- Investigate new concepts or manufacturing processes that could reduce cost and improve quality or performance.
- Interface with vendors on component designs to determine manufacturing capabilities.
- Originate/Investigate new designs, concepts or manufacturing processes that reduce cost and improve quality and/or performance.

Qualifications

Must have a 4 Year Engineering Degree (BS, BSET, or foreign equivalent degree).
